

QUESTIONABLE WATER SOURCE? DRINKABLE.

Tactical Black O-Pen®

The Roving Blue® Tactical Black O-Pen® makes any fresh water source safe for drinking by infusing it with tiny bubbles of ozone gas. Approved by the FDA and the USDA for use in drinking water, ozone is more powerful than chlorine and is highly effective against bacteria, viruses, giardia, cryptosporidium, typhoid fever, coliform, dysentery, cholera, infectious jaundice, hepatitis, influenza virus, e-coli, enteric and many other dangerous microorganisms.

Ozone also removes unpleasant tastes and odors. You can drink water from any clear stream or tap water worldwide — safely. It's the FIRST thing that should go into your Bug Out Bag!

Roving Blue® O-Pen® Features:

- Ultra portable – weighs only 1.2 oz. (30 g)
- 5 ¾" x ½" (4.44cm x 1.27cm)
- Superior technology to competition (other pen companies use ultraviolet light; water must be perfectly clear)
- Rechargeable via USB – cord included
- Wide government acceptance – USDA, FDA, EPA: ozone is safe and effective
- No additional chemicals needed
- Fast-acting – will purify .5 L or 16 oz. of water in under one minute

No other system has these benefits!

BACKPACKER MAGAZINE March 2019 Review

Voted **LIGHTEST** Water Purifier.

"If James Bond ever needed to purify water, this is what he'd pull from his tux. It's the first portable purifier we've seen that uses ozone, which kills bacteria and viruses, and has the added benefit of neutralizing taste."
